

Mobile Handheld Devices As Information Management Tools in Higher Education

BOOK DESCRIPTION

This book is based on data and information gathered and analysed from a research project conducted at Swinburne University of Technology, in Melbourne, Australia immediately after wireless network (WiFi) technology was successfully installed.

We describe the research project and its outcome. From these strategies for the deployment of handheld devices in higher education are suggested. This discussion is then broadened to how information and communication technologies may require new thinking about management within wired and wireless communities.

BOOK AUTHORS

Geoffrey Chow B.Sc.(Monash), Dip.Prog.Tech.(CDI), MBA(VU)

Geoffrey is a lecturer and business educator at Swinburne University of Technology, Australia. He had extensive commercial experience in several industries for decades before joining the academic world where he has taught postgraduate as well as undergraduate classes.
